Interesting info for those of you who follow or have an interest in this type of data regarding succes of market liberalisation. Further interesting to note that household prices fell in Sweden and Finland, markets that already had liberalised wholesale markets, after furhter market opening to residential secotr. Note fall in German prices, which, despite bad access regime, ended up with a suicidal competition in the wholesale market by incumbents. Let me know if you need more/have any questions. mcs

Subject: EU household & industrial consumers benefit from lower electricity prices

For your information, please find attached a summary and a short analysis of two reports just out the 18th of July by Eurostat, the Statistical Office of the European Communities in Luxembourg, which present the prices of electricity for both domestic and industrial consumers collected on 1 January 2000.
