

Original Record

This is an example of an English Record. This record is managed under a singular URL, yet served differently to each user based upon their role, and the language they speak. This record is also managed by translators (one or many), who are each responsible for maintaining the version of their policy to keep it up to date. This allows the parent organization to see top down, all versions of the same record, including the ability to do a side by side comparison, including the date of each change made (to each translation) at once. This also allows each translator to log in, and see and manage only the fields that they have the rights to, for that one, singular record. This is an example of an English Record.
